

# GETREIDE SERVICE ROSTOCK GmbH

## GRAIN, FEEDSTUFFS, OILSEEDS, BUILDING MATERIALS, FERTILIZER, GENERAL CARGO

This port section handles the transshipment of grain, feedstuffs, oilseeds, malt, building materials, fertilizer and general cargo at three berths on pier IV. Two of these berths can serve ships of up to 100,000 tdw carrying capacity. A ship loader with an hourly performance of 1,000 tons is available at the grain terminal. The ships are discharged via unloaders capable of moving up to 300 tons of cargo per hour. The handling is performed via closed systems to and from the connected silo. The goods are also put into and retrieved from the silo by truck and wagon in the same manner. For this there are various receiving gutters available for loading and unloading. The silo capacity at the site amounts to 122,000 cbm. Dry bulk cargo coming in by sea is transhipped by cranes onto separate open-air storage areas and onto means of surface transport such as railway wagons and trucks.

For companies established at the port, for instance for the neighbouring malt-house of Malteurop, Getreide Service Rostock GmbH handles brewer's barley for the production and export of the finished product, malt.

The handling capacity was extended by an additional crane at berth 16. Sheet metal for EEW Special Pipe Constructions GmbH and pipes are handled here, among other things. All cranes at berth 16 are suitable for operation with grab and hook and thus extend the handling capabilities of Getreide Service Rostock GmbH universally. For direct loading there is also a mobile conveyor belt available.
